

## Inventory Measurement System

### Compact. Reliable. Affordable

- New compact and lightweight design for vessels up to 30 feet
- Weighs less than 10 pounds
- Compatible with the SmartBob2 System
- Measures solids, powders, liquids or slurries
- Minimal contact with stored material
- Built in wireless communication option
- Service and maintenance-friendly
- Trouble-free mounting on angled or flat roofs
- Scalable communication capabilities to meet your operational needs

# SMART **Bob** TS1

Introducing  Direct-to-Web Inventory Tracking Software  
The future of inventory tracking

# SmartBob-TS1 Introduction

*SmartBob-TS1 tank sensor provides years of maintenance-free service in vessels up to 30 feet.*

## Designed for smaller vessels

The SmartBob-TS1 sensor is an economical and compact inventory tracking system that has been designed for use in smaller tanks and silos. The small yet rugged design allows you to use SmartBob-TS1 in vessels up to 30 feet tall.

## Reliable under difficult conditions

The SmartBob-TS1 delivers reliable level data in applications where other technologies simply won't work. SmartBob-TS1 has become widely accepted as the standard measuring technology for reliable measurement of bulk solids. The SmartBob-TS1 measuring principle combines reliability with simplicity in a wide variety of applications.

## Real smart

The SmartBob-TS1 is compatible with its predecessor the SmartBob2. This allows you to combine the two sensors into one common system. We've made the best inventory measurement system even better, providing the most cost-effective and easiest-to-implement solution for maximizing your inventory control.

## And versatile, too

SmartBob-TS1 can handle the demands of virtually any application and vessel type. With numerous sensor probe styles, the SmartBob-TS1 effectively measures solids, powders, liquids, or slurries. With a variety of mounting accessories, SmartBob-TS1 can be used with almost any configuration of silo, bin, or other bulk storage vessels.

## Proven applications

Whether it's ground feed in a silo on a farm or fine granular solids in a plastic processor's material storage silo, SmartBob-TS1 has the power and flexibility to handle it. Airborne dust, filling noise, steam, temperature, or steep coned bottoms pose no problem to SmartBob-TS1. It's capable of measuring all your liquids, large granular, powders and dry bulk solids.

SmartBob-TS1 Electrical Side

SmartBob-TS1 Mechanical Side

- High resolution microcontrolled optical sensing system
- Heavy duty direct drive reversible motor with electronic torque control provides maximum pull strength
- Optional built-in 900 MHz wireless modem
- Dual-sided idler arm eliminates any slack in cable and stops cable from jumping off pulleys
- Braided polyester cable or Nylon jacketed Stainless Steel cable, designed for the toughest applications.
- Rotational molded polyethylene housing
- Fully sealed compartments protects the electronics from dust, debris, condensation and other contaminants

## How SmartBob-TS1 works

When a SmartBob-TS1 positioned on the top of a vessel is asked to take a measurement, a rugged motor releases a nylon cable from the supply pulley and a weighted sensor probe descends to the surface of the material.

During the descent, the SmartBob-TS1 measures the cable dispensed by counting pulses with a high resolution microcontrolled optical sensing system. When the sensor probe touches the material surface, pulses are momentarily stopped and measurement information is transmitted. The absence of pulses also cause the motor to reverse and retract the sensor probe. A second confirming measurement is taken as the probe retracts and is compared to the descend measurement.

As the probe is retracted, motor torque is automatically reduced during the last 12" of the retract cycle resulting in a "soft retract seating" which extends the life of the SmartBob-TS1 and ensures proper cable spooling.

Remotely initiate and view vessel measurements.

# Communication Accessories

## SBC push button console

This compact, manually operated console can control from 1 to 99 SmartBob-TS1 sensors with the push of a button. Individual bin heights are programmed to the console and measurements are displayed as distance to product, height of product, and percent full.

## Remote Start Unit (RSU)

The RSU provides an external start input, a 4-20mA current loop output, and a remote read-out of the measurement. The RSU allows for a simple interface between the SmartBob-TS1 sensor and a PLC or DCS system. The PLC/DCS initiates the measurement by providing a dry contact closure and then can retrieve the measurement from a 4 to 20 mA output.

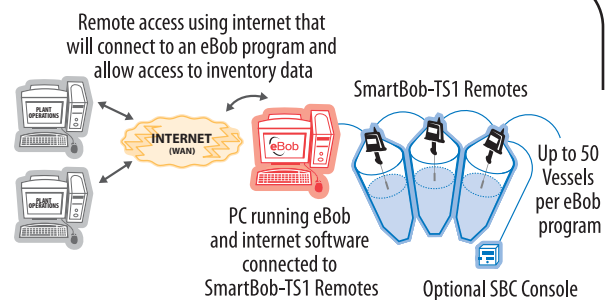

## eBob Software

The eBob software allows direct-to-web inventory tracking from a PC with internet access. The eBob software gathers data from up to 100 SmartBob-TS1 sensors. The powerful software provides an unsurpassed graphical representation of critical inventory data, including:

- Vessel number
- Contents and title
- Headroom
- Height of product
- Percent full
- Product weight
- Product volume
- Status
- Date/time of measurement

## MUCM communication module

The MUCM is a universal communication module capable of translating the SmartBob-TS1 protocol to Modbus RTU, Ethernet, Devicenet™, Modbus Plus™, or Profibus protocols. The MUCM can also be used as a stand-alone control. The MUCM module has a built-in SmartBob application that will initiate scheduled measurements on all SmartBob-TS1 sensors and capture and store measurement data. This data can be sent via a modem to a Web data service or to another computer with a Data Base Management System running a program to manipulate data in a readable format.

## Wireless data transmitter

Eliminates the need for running long spans of communication cable by providing two-way wireless data communication between SmartBob-TS1 sensors mounted on top of storage vessels and the control source on the ground. A wireless modem can be installed in one SmartBob-TS1 per group and the remainder of the sensors hardwired. Or, wireless modems can be installed in all SmartBob-TS1 sensors.

# Specifications/ Accessories

**Power Requirements:** 115 VAC 60Hz  
**Power Consumption:** 12 VA Continuous 30 VA intermittent  
**Current Draw:** @115VAC: 0.1 A Continuous 0.26A intermittent  
**Temperature:** -20° F to +140° F (-29° C to 60° C)  
**Measurement Range:** 30 feet Maximum  
**Accuracy:** 0.25%  
**Repeatability:** 0.1 ft (0.03 m)  
**Resolution:** 0.15 inch (0.4 cm)  
**Communication:** RS-485 Half Duplex  
**Wiring Distance:** 4000 ft (1220 m)  
**Enclosure:** Rotational molded polyethylene  
**Mounting:** Special bolt on and 3" NPT  
**Conduit Entry:** Two 3/4"  
**Weight:** 9.6 lbs  
**Cable:** Braided polyester or stainless steel cable

## 30° & 40° mounting flange

SmartBob-TS1 sensors can be ordered with special mounting brackets to easily install on smaller feed bins with steep angled roofs. These flanges can be bolted directly to the roof. The flanges are available in 30° and 40°.

## Flat & angled mounting flange

SmartBob-TS1 sensors can be ordered with flat or angled mount flange for mounting on sloped roof vessels. The flanges are available in 0°, 5°, 10°, 15°, 20° and 30°.

## Digestible bottle

Polyethylene bottles can be purchased empty or filled with materials compatible with the material stored in the vessel, or filled at the factory with a food grade paraffin wax. It's called a "digestible" bottle because it can pass easily through a rotary valve or screw conveyor.

## Pipe extension

The pipe extension is an optional feature that is attached to the SmartBob-TS1 mount. The pipe extension keeps the sensor probe from being pulled up into a standpipe, functions as a bushing, and keeps the cable from fraying on sharp objects. The extension pipes are available in CPVC, galvanized, or stainless steel.

## 6" stainless steel float

This hollow inverted stainless steel cone is designed for use in liquids or light, bulk solids and powders with a bulk density greater than 3 lb./cu. ft. This sensor probe works well in corrosive materials and foodstuffs.

## Gearbox motor heater

SmartBob-TS1 can be ordered with a motor gearbox heater and thermostat when the SmartBob-TS1 sensor will be exposed to temperatures below 32° F. The heater will assure the motor operates at 100% efficiency.
